### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Barry Chapin on 07/28/2011. The application has been amended as follows:

In claim 4, lines 3-4, "so as to determine" was changed to –and determining--.

In claim 6, lines 1-2, "is arranged to comprise" was changed to –comprises--.

In claim 8, line 1, --the-- was inserted before "reflected light".

In claim 8, line 2, the comma after "a pinhole aperture" was deleted.

In claim 9, line 2, "such that" was changed to –for measuring--.

In claim 9, line 3, "eye may be measured" was changed to –section of an animal body--.

Claims 15-18 were canceled.

2. The following is an examiner's statement of reasons for allowance: Rathjen (USPN 2002/0171804-Cited by the Applicant) discloses a method and apparatus for determining the corneal thickness of an eye by means of light rays being projected onto and into the cornea, and registering the reflected rays by the cornea. Rathjen discloses a contact element which is placed on the contact area of the cornea and the light is projected through the contact element onto and into the cornea so that it contacts the cornea in a plurality of contact areas. The prior art fails to disclose focusing a

monochromatic light to a plurality or continuum of measurement locations along a measurement line passing through the section of an animal body, in combination with the other claimed features. Hakamata (USPN 6,152,875-Cited by the Applicant) discloses a light beam is irradiated to an eyeball, and the first (from an interface between the cornea and the ambient air) and second (from an interface between the cornea and the anterior aqueous chamber) backscattered light beams of the irradiated light beam is detected. A refractive index of aqueous humor is calculated from intensity values of the first and second backscattered light beams in order to determine the glucose concentration in the aqueous humor. The prior art fails to disclose a method and apparatus for measuring an apparent depth of a section of an animal body comprising the step of focusing a monochromatic light to plurality or continuum of measurement locations along a measurement line passing through the section in order to provide an extended focal region for the monochromatic light. Parel et al. (5,152,759) discloses a noncontact laser microsurgical apparatus and method comprising a laser source, and an axicon lens for forming the converged laser beams into a plurality of paraxially distributed beam spots on the cornea. The prior art does not disclose having a detector assembly for detecting the reflected light from at least one of the plurality of measurement locations and a processor in communication with the detector assembly for measuring an apparent depth of a section of an animal body, in combination with the other claimed features. Kuhn et al. (USPN 5,785,651-Cited by the Applicant) discloses an apparatus and method for determination of surface profile and depth reading comprising a polychromatic light source, means for focusing the light onto a point of

Art Unit: 3777

sample target, means for detecting the wavelengths of light reflected from the sample target, and the means for detecting the light passes through a pinhole aperture before the light is detected according to wavelength. The prior art fails to disclose using a monochromatic light and focusing the monochromatic light to plurality or continuum of measurement locations along a measurement line passing through the section in order to extend focal region of the monochromatic light such that the incident light is focused to all measurement locations along the measurement line concurrently, in combination with the other claimed features. Samuels et al (USPN 5,582,168-cited by applicant) discloses an apparatus and methods for characterizing biological tissues and other turbid media including an illuminating source for directing electromagnetic radiation into the media to be examined, a collecting, separating and detecting means, a processing means for determining the mathematical relationship between separated radiation. Samuels et al. discloses a unique optical system that allows the user to selectively target small volumes within the lens for excitation with a light source which directs light through a variable optical attenuator and then focuses it onto an optical fiber to be directed to the target area. Both the backscattered Rayleigh radiation and the excited fluorescent radiation being emitted from the targeted area within the lens are collected and directed into the spectrometer with its enhanced diode detector array. The relatively large focal cone of both the delivery and the collection optics, and the small spot size illuminated and imaged, allows the operator to easily distinguish the boundaries at both the anterior and the posterior of the lens merely by observing the visual change in the image as seen through the eyepiece. The prior art fails to disclose

a method and apparatus for measuring an apparent depth of a section of an animal body comprising the step of focusing a monochromatic light to plurality or continuum of measurement locations along a measurement line passing through the section in order to provide an extended focal region for the monochromatic light such that the incident light is focused to all measurement locations along the measurement line concurrently, in combination with the other claimed features.

3. It is noted that Applicant uses the term "detecting" to refer to only allowing light originated from a particular plane within the region under investigation to pass as set forth in specification page 18.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
